

SRKR ENGINEERING COLLEGE (A)

SRKR Marg, CHINA AMIRAM, BHIMAVARAM-534204, W.G. Dt., A.P., India.

GUIDELINES FOR WRITING THESIS

Preamble

While utmost attention must be paid to the content of the Project report, which is being submitted in partial fulfilment of the requirements of the B.Tech degree, it is imperative that a standard format be prescribed. The same format shall also be followed in preparation of the final soft copies to be submitted to the Department/Library.

1. Introduction

This document provides guidelines for students on how to prepare their B.Tech / M.Tech project report. The report is submitted to the Institute as part of the requirements for awarding the Bachelor of Technology degree. The project report is very important because it presents the work carried out by the student during the project. Therefore, the report should follow a clear and uniform format so that it is easy to read, maintains academic ethics, and ensures consistency across the Institute.

2. Report layout

The project report should be arranged in the following order:

1. Cover Page
2. Inside Title Page
3. Student /Candidate 's Declaration (in the prescribed format)
4. Certificate signed by the supervisor(s)
(in the prescribed format)
5. Certificate signed by the external supervisor
(only if project is carried out outside the institute)
6. Acknowledgements
A short note thanking individuals or organizations that supported the project.
7. Abstract
A brief summary of the project including objectives, methods, and key results.
8. Table of Contents
9. List of Tables
10. List of Figures
11. List of Tables
12. Abbreviations/ Notations/ Nomenclature
(Include only if required)

3. Main text of the report

Chapter 1: Introduction

This chapter should briefly explain:

- The problem being studied
- The objectives of the project (ensure three or four objectives)
- The scope of the study
- The importance of the work
- The reason for choosing the topic

Chapter 2: Literature Review

This chapter should present a review of previous studies and research related to the project topic. Gaps should be identified, need to cite latest articles only.

Problem Statement

Chapter 3: Methodology/System Design

3.1 Existing System

3.2 Proposed System

3.3 Requirements

3.3.1 Software Requirements

3.3.2 Hardware Requirements

3.4 System Architecture

3.5 Design Diagrams / Proposed Model

3.5.1 UML Diagrams / Dataset

3.5.1.1 Use Case diagram / Features

3.5.1.2 Class diagram / Pre-processing

3.5.1.3 Sequence diagrams

Chapter 4: Implementation and Testing

4.1 Implementation Approach

This section explains how the project models was built step-by-step in practice.

4.2 Functional and Algorithmic Implementation

It should describe exactly what was implemented from various metrics /

Models and how it works in this Project / model

4.3 Integration Details (if applicable)

This section should describe external or supporting components integrated into the system.

4.4 Testing

4.4.1 Test Cases

Chapter 5: Discussion of Results

This chapter explains and interprets the results obtained, comparing them with expected outcomes or previous studies.

Chapter 6: Conclusions & Future Work

This chapter should summarize the main findings of the project. It should preferably be not more than two pages.

After the conclusions, a short section may be included suggesting future research or improvements related to the project.

References

The references are to be listed in the order of its appearance in the text. References are to be numbered within square brackets Ex: [1], [2]... and are to be given after 'Scope for future work'. List all the books, journals, articles, and online sources used in the project report in a proper referencing format (APA style).

Appendix

- A. Sample Code (Project Main Functionality)
- B. Project Snapshots/ Screenshots
- C. Compiled/ Published Research Paper
- D. Published Research Paper certificate (If published)

Note 1: In case of ML related projects 3.5.1 is changed as given below

- 3.5.1 Dataset
- 3.5.1.1 Features
- 3.5.1.2 Pre-processing

Note 2: Research paper preparation

All students are instructed to convert their project work into a research paper in the given format.

- A **hard copy** of the research paper must be submitted to the CSE Office along with the project book.
- A **soft copy** of the research paper must be submitted to your supervisor.
- The research paper **should not be included** in the project book.

Note 3: Project Book Submission Instructions

- **Each project batch** must prepare a total of **(n + 2) project books**,
Where n = number of students in the batch.
- **Total books = n (individual copies) + 2 (common copies)**
- **Individual Project Books:**
 - **These are individual project books** one for each member of the batch.
 - In this book, the **cover page and front pages should contain only your name** (not the names of other team members).
 - Must carry this book to external project viva voce examination, project Expo and **No need to submit it.**
- **Supervisor Copy: First common copy of the project book**
 - In this copy, the **cover page and front pages should include the names of all team members.**
- **Department Library Copy: Second common copy of the project book**
 - In this copy as well, the **cover page and front pages should include the names of all team members.**

Supervisor Copy and Department Library Copy are to be submitted to CSE office.

Note 4: A soft copy of the project book pdf format should also need to upload to the folder shared by our CSE Office.

4. Page and text format

Page format guidelines for project report (Double-sided printing only)

The printed sheets of the project report shall follow the following written area and margin specifications. Only double-sided printing is permitted.

a) Top and bottom layout

Parameter	Size
Top margin	15 mm
Header height	3 mm
Header separation	12 mm
Bottom margin	22 mm
Footer height	3 mm
Footer separation	10 mm
Text height	245 mm
Text width	160 mm

If a header is not used, the top margin shall be 30 mm.

Left and right margins (Double-sided printing)

For double-sided printing, the margin on the binding side must be wider to allow proper binding.

Odd number pages (Right-hand pages)

Margin	Size
Left margin	30 mm
Right margin	20 mm

Even number pages (Left-hand pages)

Margin	Size
Left margin	20 mm
Right margin	30 mm

Pagination

Page numbering in the text of the thesis shall follow the guidelines given below.

Pagination style: Page numbering in the main text of the thesis shall be in Hindu–Arabic numerals (1, 2, 3, ...) placed at the center of the footer.

First page of Introduction: The first page of the Introduction chapter shall be counted as page “1” but the number shall not appear in print. The second page will bear the number “2”, and numbering shall continue sequentially thereafter.

Beginning of Chapters: Each chapter shall begin on a fresh page. In the case of double-sided printing, every chapter must start on a fresh odd-numbered (right-hand) page.

Preliminary Pages: Pages appearing before the Introduction chapter (such as Abstract, Acknowledgements, Table of Contents, List of Figures, etc.) shall be numbered using lowercase Roman numerals (i, ii, iii, iv, ...), placed at the center of the footer.

Table / Figure format

As far as possible tables and figures should be presented in portrait style. Small size table and figures (less than half of writing area of a page) should be incorporated within the text, while larger ones may be presented on separate pages. Table and figures shall be numbered chapter-wise. For example, the fourth figure in chapter 2 will bear the number Figure 2.4 or Fig 2.4.

Table number and title will be placed above the table while the figure number and caption will be located below the figure. Reference for Table and Figures reproduced from elsewhere shall be cited in the last and separate line in the table and figure caption, e.g. (after Marck et al. (2003)).

Text setting

The text shall be printed on both sides employing LaserJet or Inkjet printer, the text having been processed using a standard text processor. The standard font shall be Times New Roman of 12 pts with 1.5-linespacing.

Equations are to be numbered in round brackets with Chapter information, Ex: Chapter 2, first equation – (2.1)...

AI usage

Inclusion of content created by an AI tool: The use of AI is acceptable primarily to improve readability and language usage. In addition, AI-generated content is only permitted for sections that provide an overview of the research literature or explain the theoretical framework of the bachelor's/master's thesis. It is not allowed in any other sections or chapters that deal specifically with the execution of important research tasks such as modelling, interpreting data or drawing scientific conclusions.

It should be ensured that the use of AI tools does not infringe the intellectual property of others and does not lead to scientific misconduct, for example in the form of plagiarism.
